Key Point: *The central theme of this book (class) is to learn how to solve problems by writing a program.*

Term	Definition
Programming	Programming is the act of creating or developing software.
Program	A program is a list of instructions that tell a computer – or a computerized device – what to do.
Programming Language	A programming language is a language designed to write instructions for a computer. The language is so designed so that symbolic values in the language can be translated to binary-coded values understood by the computer. Java is an example of a programming language.
