Exp expression(Exp* l, Exp* r, string relop)*

1. Both expression *l* and *r* must have the same type.
2. Create PCode *P* with the following
 - 2.1. Label: ""
 - 2.2. PCode Op: parameter *relop*.
 - 2.3. Operand 1: Use the TypeChar for the Type of operand, parameter *l* or *r*.
 - 2.4. Operand 2: ""
3. Create an expression *E* with the following
 - 3.1. Left sub expression: parameter *l*.
 - 3.2. Right sub expression: parameter *r*.
 - 3.3. PCode: PCode *P* created in step 2 above
 - 3.4. Type: Boolean
4. Return expression *E*.
