

The Pasm Parser implements the grammar given in the project description for project p04.2 (<https://cs2.uco.edu/~trt/cs5023/p04.2.pdf>). The project is essentially no different than project p02 where you were assigned to implement a parser for the Subset Pascal Programming Language.

Testing: Your instructor suggests that you write a suite of test cases such that every rule in the grammar is exercised at least one time.
